TECHNICAL DATA SHEET & PRODUCT DESCRIPTION

LINOFIN

Extreme absorbency for a hygienic barn and a soft, dry bed.

Product description

Optimise hygiene and animal comfort in your barns with LINOFIN, a 100% natural bedding that is de-dusted several times. LINOFIN is made from high-quality flax, finely ground in a hammer mill with a 2 mm screen. This creates an extremely fine, uniform microstructure with an enormous contact surface. That larger surface opens up capillary action straight away, giving moisture absorption up to twelve times higher than traditional straw.

Thanks to this fine texture, you create a dry, stable and wonderfully soft lying area in the cubicles. This is essential for preventing joint and skin irritation (such as hock abrasions) in your herd. LINOFIN has a naturally disinfecting effect that minimises bacterial infection pressure in the cubicles. This has a direct positive effect on udder health and helps to lower the somatic cell count in the milk effectively.

Whether you use it in deep-bedded cubicles or as a top layer on cow mats, LINOFIN's unique structure keeps it perfectly in place, drastically reduces your manure volume and composts very quickly into a high-quality fertiliser for an efficient cycle on your farm.

Up to 12×	< 2 mm	100%
more absorbent than traditional straw	very fine, soft and uniform structure	natural, free from chemical additives

Use and storage advice

Always store LINOFIN dry and under cover to preserve its extreme absorption capacity. Free from chemical additives.

Why choose LINOFIN?

High moisture absorption
Flax absorbs liquids and ammonia very quickly, so the top layer stays dry and infection pressure in the cubicles is kept to a minimum.

Less manure, more efficiency
Thanks to its high absorbency you need less material, which means a lower manure volume and lower disposal costs.

Rapid composting
It breaks down very quickly into high-quality fertiliser, contributing to an efficient cycle on your farm.

Dust-free working environment
The product is de-dusted several times, ensuring a healthy barn climate for both farmer and livestock.

Udder health
The naturally disinfecting effect has a positive influence on udder health and the somatic cell count in the milk.

Technical specifications

Property	Specification
Product name	LINOFIN
Raw material	100% natural flax shives (renewable by-product)
Production process	Mechanically ground (hammer mill, 2 mm screen) and mechanically de-dusted several times
Structure / fraction	Very fine, soft and uniform structure (< 2 mm)
Absorbency	Up to 12× higher than traditional straw; absorbs liquids and ammonia immediately
Moisture content	9% – 12% (optimised for maximum moisture uptake)
Indicative bulk weight	approx. 140 – 175 kg/m³
Application	Ideal for cubicle housing (both deep bedding and on mats/mattresses)
