TECHNICAL DATA SHEET

Linogrof

Premium flax bedding (flax shives) for large-scale agricultural and industrial applications.

Product description

Linogrof consists of the 100% natural woody core particles (shives) of the flax plant, obtained during scutching. During processing the product undergoes multiple mechanical de-dusting and extraction, resulting in a virtually dust-free, uniform and highly absorbent bulk product.

450%	92 m³	8–12 wks
absorption (moisture and ammonia)	per load, walking floor	to full composting

Technical parameters

Property	Specification
Raw material	100% natural flax shives (*Linum usitatissimum*)
Grade	Premium coarse grade
Moisture content	approx. 9 – 12% (at loading)
Bulk density	approx. 100 – 120 kg/m³
Absorption capacity	Up to 450% of its own weight (moisture and ammonia)
Dust content	Exceptionally low thanks to multiple mechanical extraction
Composting	100% biodegradable, fully broken down within 8 – 12 weeks (pH-neutral)
Delivery	In bulk by walking-floor trailer, from 92 m³ (one load is enough)

Applications

- **Cattle:** Ideal as cubicle bedding or for use in lime-straw mixes.
- **Poultry:** Absorbs liquid droppings and reduces footpad lesions. Houses stay dry for significantly longer.
- **Horses & stables:** Optimal stable climate, less manure, prevention of thrush.
- **Industry:** Sustainable raw material for bio-composites and the production of shive boards.

Logistics & delivery

Linogrof is delivered in bulk by walking-floor trailer, from 92 m³: one load is enough. Horizontal unloading: also in indoor arenas, open-sided barns and low sheds.

Agrilin Linogrof: optimal logistical convenience and pure value in your shed.
